

Expanding Access to Reproductive Health Care

HMA brings together experts from a full spectrum of reproductive health services including policy, clinical, operations, and research. Our team of experts have significant experience with maternity care, child health issues, and family planning. We work with clients to reach shared goals of supporting maternal and child health, expanding access to the full spectrum of reproductive health services, reducing high rates of maternal and infant mortality and morbidity, and addressing deep and persistent racial disparities in birth outcomes and the inequities that drive them.

Advocates and former leaders of community-based organizations, foundations, and other programs that support reproductive health

- » Clinicians with experience providing a full range of reproductive health services
- » Social workers and behavioral health professionals working to integrate approaches that address social and behavioral health needs
- » Program development, strategic planning, and technical assistance experts working to implement innovative models of perinatal care and policy change to address social and economic drivers of maternal health
- » Experts in value-based payment and operations related to innovative models of perinatal care

Project Examples:

Evaluating the potential impact of Federal, State, and Medicaid-specific policy changes on access to care

HMA contracted with Planned Parenthood to conduct assessments and develop reports on how access to reproductive health care would be impacted if Planned Parenthood health centers in Wisconsin no longer participated in the state Medicaid Program. These included detailed assessments of capacity among Essential Community Providers and geo-mapping of safety net people health care resources.

HMA also contracted with the Kaiser Family Foundation to better understand access to reproductive care for low-income people in five communities across the country and has conducted 50-state surveys to understand state policies. We conducted interviews with clinicians, social service providers, community-based organizations, researchers, and health care advocates,
